### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Keith Tackett on 2/12/2010.

The application has been amended as follows:

In claim 1, line 15, both occurrences of "on" have been changed to --one--.

In claim 1, line 16, "on" has been changed to --one--.

In claim 1, line 21, "hallow" has been changed to --hollow--.

In claim 23, "claim 22" has been changed to --claim 1--.

In claim 24, "claim 22" has been changed to --claim 1--.

In claim 29, "claim 28" has been changed to --claim 1--.

### ***Examiner's Comments***

An amendment, amending claim 1 and cancelling claims 21-22, 25, 28 and 40-41 was received and entered on 9/29/2009.

### ***Drawings***

The correction to the numbering of drawing 2B, on 9/29/09, has been accepted and entered.

### ***Allowable Subject Matter***

2. Claims 1-20, 23-24, 26-27 and 29-33 are allowed.

3. The following is a statement of reasons for the indication of allowable subject matter:

Seul et al. (US 7,118,900) teaches a method of modifying microparticles comprising the steps of: immobilizing a bead array in a solid gel, introducing a reaction mixture which modifies the surface of the beads by binding to the beads' surface (claimed coating) and destroying the gel to recover the beads (16:60-17:30; Fig. 7). Seul further teaches that the beads are smaller than 30  $\mu\text{m}$  (11:47-63). The reaction mixture has a higher mobility than the microparticles because the microparticles have been

Art Unit: 1792

immobilized in the gel. Furthermore, the introduction of the reaction mixture is an induced directional transport. However, Seul fails to fairly teach or suggest that the modifying includes at least one selected from the following: using the at least one component for coating the microparticles, wherein the at least one component comprises a compound selected from pharmaceutical and cosmetic active compounds; using the at least one component for coating the microparticles, wherein the at least one component comprises at least one inorganic substance; using the at least one component for coating the microparticles, wherein the at least one component comprises water-soluble organic polyelectrolytes; consecutively coating the microparticles with at least two components for the purpose of forming a shell comprising at least two layers; using the at least one component to disintegrate microparticles which are coated with a shell, resulting in the formation of hollow structures; or introducing the at least one component into the microparticles.
